

Big Data Developer

Archimiddle delivers **consultancy in IT architecture and middleware** to **support customers** with architectural decisions and implementations. The IT landscape evolves rapidly from data and application silos to agile service oriented solutions, increasing the importance of **data as a service**.

This opens new opportunities for business, such as Big Data solutions, but at the same time, these solutions must often be fit into existing data infrastructure and architecture, which can be quite a challenge.

Job description

As a Big Data developer, you will be working with multiple data stores and data types in diverse development environments.

You are able to rapidly develop and implement Big Data solutions using a variety of Big Data technologies, such as Hadoop, Neo4J, Spark, Apache Kafka.

You have a good knowledge of data techniques and project methodologies and you are an active and reliable part of a development team.

You will take responsibility for following tasks:

- Take architectural decisions, both conceptual and technical
- Translate business requirements into architectural requirements
- Guide the implementation of Big Data projects
- Be part of a team of Big Data developers
- Increase your data architecture and data science knowledge constantly

Your profile

We are not just looking for people matching all skills, but also for people with a high potential in these fields.

Conceptual skills

- Big Data Architecture
- Data Science
- Data-as-a-Service solutions
- NoSQL concepts

Technical skills

- Relational databases, SQL

- Hadoop, HDFS, and related technologies
- Graph databases
- MapReduce
- Spark
- Apache Kafka
- Big Data cloud technologies
- RESTful web services

Soft skills

- Communication skills
- Creative thinking
- Documentation skills
- Presentation skills

What we offer

We offer you a competitive salary with extras such as a company car incl. fuel, group and health insurance, laptop, and above all, an inspiring work environment with lots of room for personal improvement and knowledge expansion.
