Archimiddle actively supports creativity and forward thinking and is active in integration, data science, data and cloud architecture.

## Data Visualizer

### Job description

As a data visualizer, you are the creative technologist who is able to visualize complex data sets into meaningful UI and reporting. You are able to translate innovative data insights into attractive visualizations, for which user experience and adoption is key. As data visualizer you will be taking business people on an exciting ride, presenting them new ways of valuable data insights.

### Your profile

You are an out-of-the-box thinker who understands *data* is the new gold, and believes this needs to be shown!

You have good communication skills able to take your audience on a ride into the magical world of *data*.

While having a few years of experience, you are that young, dynamic and flexible person bringing creative flavour to our team.

You are familiar with visualisation tools and frameworks or are interested in swiftly gaining experience, but you also understand how to interpret data.

Business insights into digital marketing, sales or other departments is beneficial

As data visualizer, you will work closely with our team of data scientists.

### Nice-to-have skills

Data visualisation tools, such as Tableau, Clickview, D3.js

Data interpretation skills, such as statistics, regression

UX and graphical design

Presentation and story-telling skills

Prototyping skills

### Our Offer

We offer you a competitive salary with extras such as a company car incl. fuel, group and health insurance, laptop, and above all, an inspiring work environment with lots of room for personal improvement and knowledge expansion.
